

EU 80 Electrolytic Etch Controller

Economical and Permanent Electro-Chem Etch Marking

The electrolytic marking process uses a stencil, electrolyte and current to create a high quality mark on any conductive material. The chemical etching process has the advantage of being inexpensive and easy to use, while still giving a high quality mark.

The EU 80 is ideal for an entry level investment into electrolytic etching. Variable voltage controls between 8/16/24 volts AC are manually adjusted depending on material and mark type. This system is ideal for small batches and low volume marking.

Features of the EU 80:

- ▶ Affordable, easy to use
- ▶ Multi voltage selection 8/16/24 VAC
- ▶ Non corrosive electrolytes

Technical Data	
Input Voltage	115 or 230 VAC
Output Voltage	8/16/24 VAC
Max Power	80 VA
Dimensions	155 x 200 x 150 mm
Warranty	1 year
