

The LP Flowetch marking system is a semi-automatic compact unit which marks from the bottom. Marking from below provides improved stencil life as the stencil is constantly rinsed by electrolyte which prevents overheating. Large and small prints also benefit from this process with improved quality. Each unit is comprised of the marking control unit (EU Classic), a pneumatic system, electrolyte recycling basin, and a securing fixture for the stencil and product to be marked. The LP Flowetch system is specifically very suitable for marking any chrome-plated or nickel-plated products.

Advantages

- Non-corrosive electrolytes
- Non-smearing permanent marking
- Digital controls and display
- No part deformation

Special Accessories

- Double marking (above and below)
- Special marking heads
- Rotary switch table
- Time lapse
- Counter

Specifications

Input Voltage	115 or 230 V AC
Output Voltage	0 - 24 V (AC/DC)
Power	310 VA to 510 VA
Air Pressure	4 bar
Dimensions	365 x 500 x 400 mm
