

Full Size Rotary

For Circumferential Laser Marking

Radial Laser Marking

The full size rotary device can be utilized as an accessory with our laser marking systems to allow a user to mark text or logos radially around the diameter of a part.

This rotary tool comes standard with a 3-jaw chuck which allows users to grip on the ID or OD of a part. The 3-jaw chuck can easily be replaced with any other type of OEM chuck available on the market.

We can also design custom work holding fixtures to be used with our rotary tool device, such as pneumatic clamps, expanding bladder ID grippers and many other options.

TYKMA follows a policy of continuous product improvement. Specifications are subject to change without notice.
